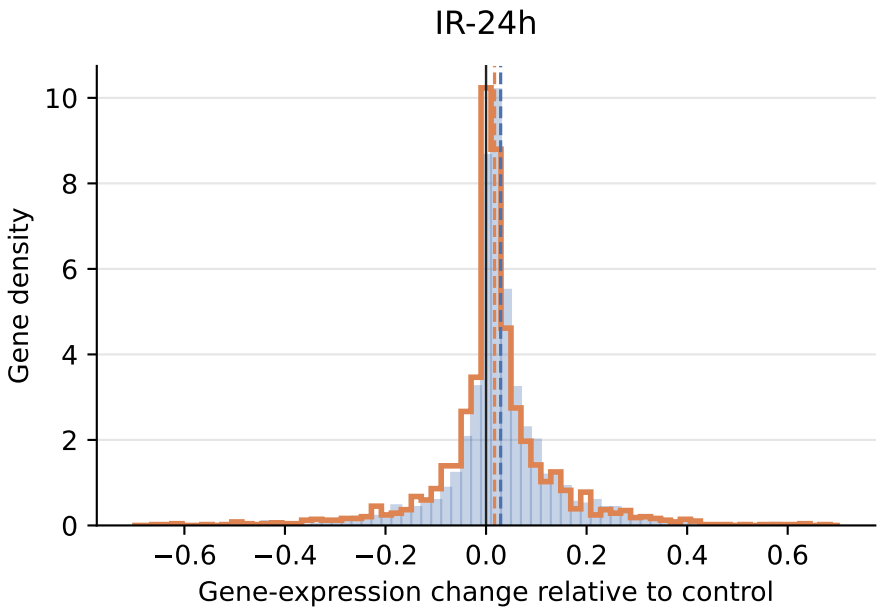
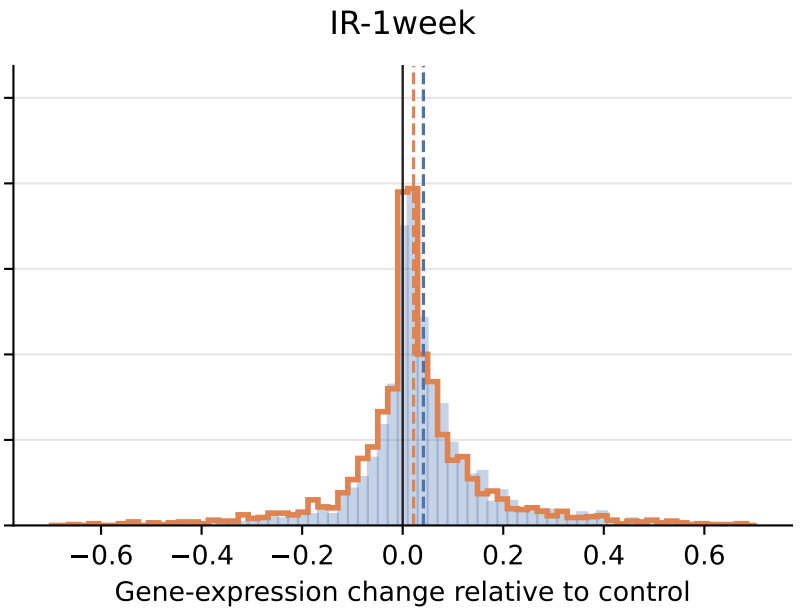
Observed and predicted gene-expression change distributions relative to control





IR-24h: positive genes observed 72.1%, predicted 65.4%
IR-24h: negative genes observed 27.9%, predicted 34.6%

IR-1week: positive genes observed 69.6%, predicted 64.7%
IR-1week: negative genes observed 30.4%, predicted 35.3%

Dashed vertical lines show observed and predicted means.
