
Linearity diagnostics for observed vs predicted gene-expression changes
A1 IR-24h: observed vs predicted
slope = 1.04
linear r² = 0.901
quadratic check Δr² = 0.003
Predicted Change in Expression Values
Observed Change in Expression Values
A2 IR-1week: observed vs predicted
slope = 1.00
linear r² = 0.880
quadratic check Δr² = 0.014
Predicted Change in Expression Values
Observed Change in Expression Values
Identity line
Fitted linear trend
B1 IR-24h: residuals from fitted line
Predicted minus fitted linear trend
Observed Change in Expression Values
B2 IR-1week: residuals from fitted line
Predicted minus fitted linear trend
Observed Change in Expression Values
Binned residual IQR
Binned residual median (descriptive)
